Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 1626

Claims 29, 31, 33-37 and 41-43 are rejected under 35 U.S.C. 102(e) as being anticipated by Reddy et al., US 2004/0097568 A1.

Claims 29 and 31 of the instant invention is drawn to a potassium salt of losartan in crystal Form X characterized by a powder X-ray diffraction pattern with peaks at about 6.9, 13.8, 20.6, 24.0, 24.8, 28.7, and 29.2 ± 0.2 , depicted as Figure 31. Claims 33-36 are drawn to a potassium salt of losartan which is substantially pure and has desired particle sizes. Claims 41-43 are drawn to a pharmaceutical composition comprising the potassium salt of losartan of claim 29, wherein claims 42-43 are drawn to the tablet form.

Reddy et al. disclose losartan potassium Form III having the X-ray diffraction pattern having peaks at: 7.154, 13.911, 20.728, 24.904, 24.192, 28.908 and 29.474 ± 0.09 (see p. 3, paragraphs [0028] & [0029]). When the margin of error for instant application and the prior art are taken into account, all of the peaks of the instant application are anticipated by the prior art.

Further, the prior art discloses pharmaceutical formulations in solid form and specifically tablets (see p. 4, paragraphs [0033] & [0034]).

The prior art does not disclose the particle size and purity of the polymorph. Nevertheless, the purity and particle size are inherent properties and thus the instant claims are anticipated. Therefore, claims 29, 31, 33-37 and 41-43 are rejected under 35 U.S.C. 102(e) as being anticipated by Reddy et al., US 2004/0097568 A1.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 1626

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 29, 31, 33-37 and 41-43 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 29, 31 and 35 claims a potassium salt of losartan in crystal form X characterized by 7 peaks in a powder X-ray diffraction pattern. The data provided in these claims is not sufficient to distinguish the claimed polymorph from the existing polymorphs.

According to Polymorphism in Pharmaceutical Solids:

The USP general chapter on x-ray diffraction states that identity is established if the scattering angles of the ten strongest reflections obtained for an analyte agree to within ± 0.20 degrees with that of the reference material, and if the relative intensities of these reflections do not vary by more than 20 percent (see Brittain, p. 236).

In this case, Claim 29, 31 and 35 shows data that does not meet the standard practice and it fails to properly characterize the claimed polymorph.

Secondly, an additional limitation such as the melting point of the claimed polymorph should be inserted into the claims in order to properly distinguish this claimed product over the prior art. The current claim fails to properly identify this product over the prior art.
